CORTE-SCOPIC DIAGRAM

Using the Corte-Scope at the correct focus the two diagrams on the reverse of this card (right and left) should blend into one image having perfect relief in all three dimensions of space. In other words you should see what appears to be a tangible wire framework suspended before you.

In like manner the objects seen in the Corte-Scopic Photographs appear standing before you in full size and perfect perspective just as you would see the objects themselves if they were placed before you.

If you do not get this effect read the instructions on how to focus the Corte-Scope.

The focal distance at which you can see this diagram best is usually the best distance for viewing the Corte-Scopic photographs.
